

ALAA EDDINE ROUCADI

AI Delivery Lead & AI Operating Model Architect | Scaled Delivery, AI Governance & Portfolio Telemetry

Nice, France (Open to Remote Europe/EMEA) • +33 06-32-76-87-64 • alaaeddineroucadi@gmail.com • linkedin.com/in/alaaeddineroucadi

PROFESSIONAL SUMMARY

AI Delivery Lead, AI Operating Model Architect, and Senior Agile Coach with 10+ years of experience bridging product delivery, scaled organizational frameworks, and AI-native SDLC transformation. Currently directing AI operating model rollout and governance inside a regulated Banking AI Center of Excellence — architecting Atlassian Rovo agent workflows across the Jira SDLC, governing responsible Claude Code adoption, building Azure AI Foundry workflows, and classifying AI use cases against EU AI Act risk tiers. Expert at establishing Strategic Portfolio & Flow Telemetry (including shipping custom Jira app Alignify) and optimizing Value Streams across multi-squad divisions (SAFe, LeSS, Spotify Model) to scale AI capabilities from PoC to production without overstating technical claims.

CORE EXECUTIVE CAPABILITIES

- **AI Operating Model & Governance Architecture:** Designing and rolling out end-to-end operating model frameworks to govern, scale, and transition AI product use cases from PoC into production across multi-squad divisions.
- **Value Stream & Flow Optimization:** Auditing enterprise software delivery chains (Value Stream Mapping, 3 Amigos, Spotify Health Checks) to eliminate systemic bottlenecks and latency in AI-augmented engineering workflows.
- **Strategic Portfolio & Flow Telemetry Design:** Architecting Jira Cloud backbones and internal governance apps (Alignify) to give executive leadership real-time cross-tribe dependency visibility, throughput metrics, and capital allocation insights.

WORK EXPERIENCE

Wemanity (Enterprise Banking Mandate)

Remote | Sep 2024 – Present

AI Delivery Coach & AI Operating Model Consultant

- **Architected AI Operating Model & Governance frameworks across 7 squads (~50 engineers and POs)**, establishing structured delivery cadences, release gates, and change management protocols for AI capability rollout.
- **Implemented Atlassian Rovo AI Agents across the Jira SDLC**, deploying task-specific agents for Definition-of-Ready compliance scoring, missing-acceptance-criteria detection, and automated gate checks at workflow transitions (verifying open PRs and test-environment readiness before tickets move to *Ready for Test*) — eliminating manual gatekeeping bottlenecks and streamlining sprint preparation.
- **Deployed Rovo Agents as an AI co-pilot for Product Owners**, assisting backlog refinement, acceptance-criteria drafting, and story-writing — reducing refinement cycle time and raising story quality entering sprint planning.
- **Coached and governed engineering squads on responsible Claude Code adoption**, establishing usage guardrails — incremental changes, independent code review separate from authoring agents, and mandatory human sign-off — to prevent unreviewed risk in AI-assisted development.
- **Evaluated and prioritized agentic use cases**, focusing development exclusively on high-impact SDLC bottlenecks and recommending against automation where it added complexity without measurable delivery benefit.
- **Directed delivery strategy for 3 AI product lines** (fraud detection ML, financial forecasting, GenAI sales copilot), aligning squad cadence and backlog structure with enterprise risk requirements.
- **Facilitated EU AI Act Risk Governance workshops**, classifying model use cases against EU AI Act risk tiers and establishing release-gate criteria for data privacy, model bias, security, and human-in-the-loop oversight.

Environment: AI Operating Model Architecture, Responsible AI Governance, Azure AI Foundry, Atlassian Rovo Platform, Claude Code, EU AI Act Governance, GenAI, Jira Cloud Administration.

Wemanity (Enterprise Banking Mandate)

Remote | Dec 2021 – Sep 2024

Agile Delivery Lead & Portfolio Telemetry Architect

- **Led Agile-at-scale operating model transformation across 2 banking tribes** (Data & Digital Enablers Tribe: Datalake, Data Warehouse, RPA; Supply Chain Finance Tribe: Confirming & Factoring), spanning **7 squads (~50 engineers)**, redesigning delivery cadence and governance (joint PI Planning, Increment Reviews, Inspect & Adapt) to lift release predictability by 25%.
- **Designed Strategic Portfolio & Flow Telemetry by building an internal Jira app (Alignify)**, architecting the Jira Cloud backbone for Agile@Scale (SAFe + Spotify Model) to give leadership real-time cross-tribe dependency visibility, eliminating 4 hours/week of manual reporting.
- **Governed data lake accessibility and pipeline standards** underpinning centralized data warehousing, enabling 5 downstream feature teams to build on clean, reliable data for analytics.

Environment: Scaled Agile (SAFe + Spotify Model), Portfolio Telemetry, Data Lake & Warehouse, RPA, Supply Chain Finance, Jira Cloud Administration, Alignify, Confluence, Miro.

Delivery Lead & Value Stream Consultant

- Directed Value Stream Optimization for architectural transformation from monolith to microservices on AWS across 2 engineering teams — zero critical incidents, 40% downtime reduction — establishing delivery foundation for B2B real estate platform used by 10,000+ property professionals.
- Diagnosed and resolved systemic delivery bottlenecks by implementing Spotify Squads Health Check across 3 squads, resolving 6 recurring blockers and improving team self-management scores by 20%.
- Instituted predictability discipline across teams (velocity, sprint burndown), raising sprint commitment accuracy from 60% to 82% over 10 consecutive sprints.

Environment: Value Stream Optimization, Scrum of Scrums, BDD, TDD, XP, Clean Architecture, .NET Core, C#, Web API, Microservices, AWS, Docker, TeamCity, Octopus.

SwissCaution, Amadeus & Capgemini

EMEA | Oct 2013 – Sep 2019

Agile Delivery Lead (LeSS) & Software Engineering Lead

- SwissCaution (2018–2019): Facilitated LeSS across 3 teams building B2C rent-guarantee platform. Coached TDD & Hexagonal Architecture, cutting defects by 25%.
- Amadeus & Capgemini (2013–2018): Led 9-person PMS squad (86% on-time delivery across 60+ sprints). Prepared commercial proposals and RFP responses to structure and sell Capgemini engineering service offerings.

SKILLS & ENVIRONMENT

C-Suite & Executive	AI Operating Model Architecture, Value Stream & Flow Optimization, Strategic Portfolio Telemetry, Responsible AI Governance, EU AI Act Risk Classification
Agentic AI & Delivery	Atlassian Rovo Platform, Claude Code Guardrails, SDLC Automation Product Ownership, Backlog Management, Agentic Workflow Governance, AI Guardrails
Scaled Agile & Delivery	SAFe, Spotify Model, LeSS, Scrum of Scrums, BDD, TDD, DDD, Software Craftsmanship, CI/CD, Mob Programming, OKRs
Technical Stack	Azure OpenAI, Azure AI Foundry, AWS (EC2, S3, Lambda), .NET Core, C#, Web API, REST APIs, Python, Vue.js, HTML5, CSS3, JavaScript, Docker
Tools & Platforms	Jira Cloud Administration, Alignify (Custom Jira App), Confluence, Miro, Planview, TeamCity, Octopus, Jenkins, Bitbucket, GitLab

CERTIFICATIONS & EDUCATION

Certifications: Certified Professional – Agile Coaching (ICAgile) • Certified Professional – Agile Team Facilitation (ICAgile) • Certified OKR Foundation (OKR Institute) • AI for Product Management (Mind The Product) • Generative AI for Business (Microsoft Azure OpenAI) • Pursuing: AI Governance Professional (AIGP, IAPP)

Education: Master 2 IT Management (IAE Lyon, 2013) • Engineering Degree in Software Engineering (INSA Toulouse / ENSA Marrakech, 2012)

Languages & Interests: French & Arabic (Bilingual), English (Fluent) • Agile Playground meetups, Coding Dojo organizer (2014-2019), Football (Jeux de Sophia league), Swimming, Ping Pong
