

SOPHIE LAURENT

Staff Cloud & DevOps Platform Architect (AWS / Kubernetes) | Cloud Architecture & Platform Engineering

EXECUTIVE SUMMARY

Senior lead / staff engineer tier (8+ yoe) leader with extensive track record governing large-scale delivery, modern operating models, and engineering execution. Brings verified enterprise telemetry: Kubernetes Scale (Managed 12 multi-region EKS clusters serving 20M daily requests with 99.99% uptime.); AWS Cloud Cost Optimization (Reduced annualized AWS cloud expenditure by 38% (\$450k/year) via Graviton and Karpenter autoscaling.); Deployment Flow Velocity (Engineered GitOps ArgoCD pipeline decreasing mean time to release from 4 days to 25 minutes.). Specialized in driving predictable delivery across multi-team ecosystems, enforcing engineering guardrails, and aligning technical architecture directly with executive commercial objectives.

CORE COMPETENCIES

- 🔧: AWS (EKS, VPC, IAM, RDS, S3), Kubernetes, Helm, Karpenter, Docker
- 🔧: AWS Cost Explorer, Kubecost, Karpenter, Graviton migration (38% savings)
- 🗣️: French (Native), English (Fluent / C1)
- 🔧: ArgoCD, GitHub Actions, GitLab CI, SonarQube
- 🔧: Terraform, Terragrunt, Ansible
- 🔧: Prometheus, Grafana, Datadog, OpenTelemetry, SLO/SLI definition

PROFESSIONAL EXPERIENCE

Staff Platform Engineer & Cloud Architect

PayFlow Cloud (Paris / Remote)

- Managed and scaled 12 multi-region EKS clusters serving 20M daily requests with 99.99% uptime across EU-West regions.
- Architected enterprise GitOps continuous delivery using ArgoCD and Terraform, decreasing mean time to release from 4 days to 25 minutes.
- Spearheaded FinOps initiative migrating workloads to AWS Graviton and Karpenter dynamic autoscaling, cutting cloud infrastructure spend by 38% (annualized savings).
- Built centralized developer platform (IDP) enabling 80+ software engineers to self-service ephemeral staging environments.

Senior DevOps Engineer

ScaleCommerce (Lyon, France)

- Migrated legacy monolithic e-commerce application from VMware on-premises to AWS Kubernetes architecture with zero downtime.
- Automated multi-account AWS Landing Zone with Terraform and AWS Control Tower across 15 production and development accounts.
- Implemented robust observability stack using Datadog and OpenTelemetry, reducing MTTR on critical production incidents by 65%.

EDUCATION & CERTIFICATIONS

- 🎓
- 🎓
- Master of Science in Computer Science & Network Engineering — INSA Lyon
